## The Ultimate Transfer Unit

# The TLC Unit™

**“Now our mother has the option to stay at home and enjoy her privacy. Being able to get in and out of bed on her own will change her life...and ours.”**

- Less expensive than care givers or nursing homes.
- Get in and out of bed with little or no help.
- Enjoy greater freedom and independence.
- Enhance your quality of life.

## Finally...a working solution!

Millions of people have difficulty getting in and out of bed due to a wide variety of illnesses and physical limitations. The Transfer & Lift Control Unit (TLC Unit) provides an immediate solution to these challenges. The original bed was designed by a Parkinson's patient. A patent is now pending.

***There is no other bed like it!***

## About The TLC Unit™

The TLC Unit was developed for the express use of people who have physical challenges which make it difficult to get in and out of bed unassisted. Using a hand operated switch, the bed will lift you from the resting position to the standing position. The TLC Unit will enable you to stand and walk or transfer to your walker or wheel chair with little or no help from a caregiver.

## The TLC Unit™ Features

The Unit is constructed with superior quality materials with emphasis on safety, comfort and durability. It is fully counter-balanced and designed to accommodate up to a 700 pound person. It is simple to operate, and no mechanical maintenance is required.

The Unit includes numerous safety features including sturdy control grips on both sides of the bed, a backup battery in case of power outages, and mattress retainers to hold the mattress in place when the bed is in the upright position.

The Unit is designed to be fully operational from the control grip switches, as needed. They control all of the bed's operations including the adjustable head rest, vertical bed lift, and safety lamps to illuminate the foot of the bed when standing. The standing surface of the bed has a non-slip surface for your convenience and safety.

## Who Can Benefit?

Anyone who has difficulty transferring in and out of bed without assistance (or those who provide care for such residents) can benefit from The TLC Unit. It is ideal for retirement and assisted care facilities, as well as private homes. The Unit can especially benefit people with the following chronic diseases or physical limitations: Severe Arthritis, Osteoporosis, Congestive Heart Failure, Cancer, Chronic Obstructive Pulmonary Disease, Kidney Disease, Multiple Sclerosis, Transverse Myelitis, Parkinson's, Alzheimer's, Cerebral Palsy, Morbid Obesity, Traumatic and Sports Related Injuries.
